ICS : 13.220.20, 91.060.50
National Ref : prEVS 871
Title : Fire safety and emergency exit doors and door hardware - Use
Scope : This standard specifies requirements for use of fire safety doors and emergency exit doors and there hardware in buildings. Requirements for emergency exit doors in this standard are implemented for doors on escape routes; these doors may have a function of fire safety or not. The particular need to meet the fire safety or emergency exit requirements depends on particular location of the door in the building.
This standard does not include special requirements for keeping people in locked rooms. The solutions for this kind of rooms should be worked out separately for each room. This standard does not describe methods for testing of fire safety doors and emergency exit doors; these methods are described in separate standards. The use of this standard may be affected by development of European product standards for doors and windows.

Established
ICS : 91.010.30, 91.080.40
National Ref : ÖNORM B 1992-1-1/A
Title : Eurocode 2 - Design of concrete structures - Part 1-1: General rules and rules for buildings - National specifications concerning ÖNORM EN 1992-1-1, national comments and national supplements
Scope : This Austrian Standard specifies national parameters to ÖNORM EN 1992-1-1 and shall be applied jointly with ÖNORM EN 1992-1-1 in Austria. This standard applies to the design of buildings and civil engineering works in plain, reinforced and prestressed concrete. It complies with the principles and requirements for the safety and serviceability of structures, the basis of their design and verification that are given in EN 1990: Basis of structural design.

ICS : 93.020
National Ref : ÖNORM B 1997-2
Title : Eurocode 7: Geotechnical design - Part 2: Ground investigation and testing - National specifications in connection with ÖNORM EN 1997-2 and national supplements
Scope : This ÖNORM defines requirements for geotechnical investigations and supports the implementation of ÖNORM EN 1997-2. These standards shall be applied jointly. This ÖNORM applies to geotechnical investigations of soil and rock as subsoil and construction material for all types of construction works, including underground constructions, construction of landfills and remediation of contaminated soils.
 For cavernous underground constructions deviations from the present ÖNORM are permissible, if sufficiently justified.
 This ÖNORM doesn't apply to mining, testing of rock as a construction product and the exploration of raw material deposits. This ÖNORM contains requirements concerning design, execution and evaluation of geotechnical investigations and should ensure that soil or rock properties of the subsoil are known when designing the geotechnical structure.

National Ref : nsBAS EN 1991-1-5/NA:2016
Title : Eurocode 1 - Actions on structures - Part 1-5: General actions - Thermal actions - National annex
Scope : This document constitutes the National Annex to BAS EN 1991-1-5:2016, Eurocode 1 - Actions on structures - Part 1-5: General actions - Thermal actions. The European Standard EN 1991-1-5 allows national safety parameters to be specified for a number of clauses. These

national determined parameters (NDP) cover alternative procedures, the provision of individual values, and the selection of classes from designated classification systems. The relevant parts of the text are identified in the European Standard by references to the possibility of national choice. This National Annex contains national provisions for the determination of thermal actions on buildings, bridges and other civil engineering works.

Title : Method for the assessment of potential production of methane from anaerobic digestion in wet conditions.
Scope : This technical specification defines a batch laboratory method for the quantitative assessment of the biochemical methane production by biodegradation of liquid and solid

organic substrates produced by anaerobic microorganisms.

It is not applicable to the assessment of biochemical methane production from digestate if the goal is to determine its Green House Gas emissions and its residual biomethane potential.

It refers to tests made in mesophilic and wet conditions, thus on a mixture with a total solid component less than 50 kg/m³ and in a temperature range from 35 to 42°C.

The method is applicable to biological tests. Parametric or stoichiometric methods are not in the scope of this technical specification.

13.160, 45.080
National Ref : ÖNORM ISO 14837-1
Title : Mechanical vibration -- Ground-borne noise and vibration arising from rail systems -- Part 1: General guidance
Scope : This ÖNORM provides general guidance on ground-borne vibration generated by the operation of rail systems, and the resultant ground-borne noise in buildings. It lists the factors and parameters that need to be taken into consideration and offers guidance on prediction methods appropriate for a range of circumstances (e.g. to support the assessment of effects on human occupants and sensitive equipment or operations inside the buildings in addition to the predictions required to assess the risk of damage to building structures). Attention is paid in ISO 14837-1:2005 to characteristics of the source: emission (e.g. train, wheel, rail, track, supporting infrastructure); propagation path: transmission (e.g. ground condition, distance); and receiving structures: immission: (e.g. foundations, form of building construction). The guidance covers all forms of wheel and rail systems, from light-rail to high-speed trains and freight. ISO 14837-1:2005 provides guidance for rail systems at-grade, on elevated structures and in tunnels. It does not deal with vibration arising from the construction and maintenance of the rail system. It does not deal with airborne noise. Structure-radiated noise from elevated structures, which can have a significant environmental impact, is also excluded.

 Title : Confined spaces - Classification and safety criteria
 Scope : Many workplaces contain areas that are considered "confined spaces" because while they are not necessarily designed for people, they are large enough for workers to enter and perform certain jobs. A confined space also has limited or restricted means for entry or exit and is not designed for continuous occupancy. Confined spaces include, but are not limited to, tanks, vessels, silos, storage bins, hoppers, vaults, pits, manholes, tunnels, equipment housings, ductwork, pipelines, etc. The Presidential Decree 177/2011 requires the observance of obligations for the contracting Employer that don't take into account the different types of confined spaces (structural or plants differences, work activities, nature

and type of used hazardous substances).

The aim of a standard on this topic is to support the Employers in analyzing and assessing whether within the company there are areas which fall within the scope of Presidential Decree 177/2011, bringing operational guidance on their management. In order to access into confined spaces, after preliminary verification at the work, it can be useful to divide the environments in various types, identified either on the basis of structural and plant characteristics both in relation to work activities from which the risk originates. Specific procedures, preventive and protective measures and emergency procedures should be associated with these different types.

Country : Sweden **Latest Date for Comments :** 2016-08-07

Project ID : 550100-1/0001 **Project Established**

ICS : 43.040.70

National Ref : 550100-1

Title : Commercial road vehicles –drawbar eye – Interchangeability – Installations

Scope : This Swedish Standard specifies the characteristics of drawbar eyes installations, necessary for interchangeability in installation to a drawbar of a towed trailer.
 This Swedish Standard is applicable to mechanical connections designed for commercial

vehicles and trailers, the maximum mass of which is above 3,5 t.

Subsector T09: MATERIALS HANDLING AND STORAGE EQUIPMENT

Subsector : T09 **Registration Date :** 2016-06-22

Organization : ASI

Country : Austria

Project ID : 00026836/0001 **Project Established**

ICS : 55.180.99

National Ref : ÖNORM B 4920-3

Title : Terminals for transshipment of goods - Planning - Part 3: Railway sidings

Scope : This ÖNORM is to be used as basis for the planning of new railway sidings for cargo transfer and for changes of existing plants. It is valid in principle for railway sidings with a rule track gauge of 1,435 mm (standard gauge) and can be used in a general manner also for railway sidings with other track gauges (narrow gauge).

Country : Austria

Project ID : 00026837/0001 **Project Established**

ICS : 55.180.99

National Ref : ÖNORM B 4920-5

Title : Terminal for transshipment of goods - Planning - Part 5: Terminals for combined traffic

Scope : This Austrian standard applies to the planning of terminals for combined traffic. Depending on the concerned transport modes (road, rail, water) it shall be used together with ÖNORM B 4920-1 to -4 and -6. It deals with common transshipment types of combined traffic. Combined traffic involving aircraft is not included. In this regard see the list of standards in the bibliography.

Title : Management system reconciling professional, family and personal life. Requirements
Scope : This Standard sets out the requirements of a management system that allows an organization to develop and implement politics, practices, goals, coherent actions and others that said organization may already have, in terms of Conciliation. The requirements are generic and intended to be applicable to all organizations, public or private, regardless of type, size or juridic status, that want: a) To establish, implement, maintain and improve a Conciliation management system between professional, family and personal life. b) To make sure of the conformity with the Conciliation politics and practices already adopted.
